**Subject:** Thanks

Dear Prof Kwoh,

I just want to drop an email to thank you for your teaching for the past 2 years. It has indeed been a pleasant experience to be taught by you as well as the rest of the M.Sc. Bioinformatics team of lecturers. The course has been an eye-opener for someone who has never been exposed to the use of computational capabilities in the area of biological science.

I would also like to express my gratitude for your guidance in the subjects that you have taught in, especially in BI6102, BI6103 and BI6123. Personally, I was a little surprised that you would be teaching BI6123 because the previous 2 subjects were related to computational biology and somehow I couldn't quite relate how you would be teaching this module. But I guess you have surprised me by showing your competency in this area, as well as showing myself and the rest of the class how computational methods can be used in the area of proteomics.

I am also like to express my heartfelt thanks for your taking time off to come back on a Wednesday after all classes have ended just to make time for us who may have problems with the assignment. This is really much appreciated because a lot of us would have to juggle between the pressure of completing the assignment and preparing for the examinations. Creating a discuss board for us to share our ideas had also helped us tremendously, not to mention answering our emails at odd hours of the day.

I am glad to have been taught by a committed lecturer as yourself, and I am sure that you will continue to be a great teacher to your students.

Best regards,  
Angela
